

AURORA | 360

January 23–27, 2020

THE NORTHERN LIGHTS—LIKE NEVER BEFORE!

The *aurora borealis* (northern lights) are truly one of the world's greatest celestial phenomena. A once-in-a-lifetime experience, the groundbreaking new Aurora | 360 tour is the ultimate way to experience them. On board a private charter jet, you'll have the best access possible for seeing the northern lights.

To see the northern lights is an amazing moment in all situations, but to capture them well on camera adds exponentially to the experience. The photography services for the Aurora | 360 Experience will once again be lead by an award-winning Canadian photographer. Hence, you will witness and record colourful apparitions that will become treasured memories! At 36,000 ft. above sea level, traveling at speeds of up to 500 miles per hour, and following a custom flight path, determined by our science team to optimize aurora viewing potential, your on-board experience cannot be more unique.

“Leaders in their roles”

Being the only ones in the world with a fully immersive astrotourism experience package, we have the flexibility to select the better of two nights for our flight, based on the three-day NOAA Aurora forecast, to ensure the greatest experience!

What Is Astrotourism?

Astrotourism is exactly as it sounds: Traveling to exciting new places to learn more about the night sky and natural world! Aurora | 360 is proud to pioneer this category in Canada’s Yukon. And, yes—astrotourism is now officially a thing. But with our clear, dark night skies and dancing northern lights, we’ve always been on trend.

Astrotourism through the Aurora | 360 Experience includes various pre- and postflight activities; Yukon-inspired meals; a full evening of Yukon First Nations stories, dance, and culture; along with another evening in the company of very special guest speakers welcomed from organizations such as NOAA and the RASC. In addition, the nature day showcases Yukon’s unique land, water, and sky.

Aurora | 360 provides activities that highlight the colours of the Yukon through science, culture, and nature events.
